Title	"iMazing could not back up" - back up fault - Windows 10 Pro for Workstations 64-bit
System information	<p>Computer:</p>  <p>The screenshot shows the Windows System Information window. It lists the following details:</p> <ul style="list-style-type: none">Operating System: Windows 10 Pro for Workstations 64-bitCPU: Intel Xeon W 2235 @ 3.80GHz, Cascade Lake-W 14nm Technology, 38 °CRAM: 32,0GB Dual-Channel Unknown @ 1464MHz (21-21-21-47)Motherboard: Dell Inc. 06JWJY (CPU0)Graphics: 24P1W1 (1920x1080@60Hz), 24P1W1 (1920x1080@60Hz), 2047MB NVIDIA Quadro P400 (Dell), 38 °CStorage: 476GB NVMe PM981a NVMe Sams (RAID (SSD)), 3726GB TOSHIBA MG04ACA400NY (SATA), 42 °CCPU Details (Intel Xeon W 2235):<ul style="list-style-type: none">Cores: 6Threads: 12Name: Intel Xeon W 2235Code Name: Cascade Lake-WPackage: Socket 2066 LGATechnology: 14nmSpecification: Intel Xeon W-2235 CPU @ 3.80GHzFamily: 6Extended Family: 6Model: 5
Device	iPhone 12 mini iOS 14.6 [more information at attachment]
Issue type (functional, visual, content, performance, crash)	functional
Frequency	every time
Issue category (critical/major/medium/minor)	critical

Action performed

1. Start the computer and iMazing software
2. Connecting the iPhone to the computer
3. Select "Back up" option

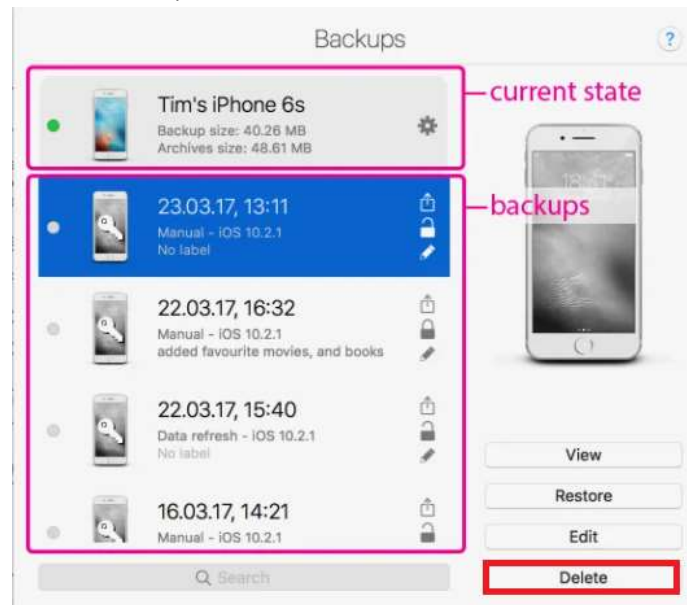

iPhoneVictoria

4. Approval action by the button "Back up"
5. Waited to the finished process. Selected "iPhoneVictoria Backups"

6. Selecting the last backup version from the list and deleting (according to the guide: <https://imazing.com/guides/manage-your-iphone-or-ipad-backups-with-imazing#delete-backup>)

7. Selected "Back up" option at the main window of software and approved action by "Back up" button.
8. Error message was displayed.

Expected result	Create a new backup
Actual result	A new window with an error message
Error message	Details: Error (3) Failed to create a snapshot: File exists (17) at path "/private/var" (MBErrorDomain/3)

Comment:

The fault appeared not only when trying to create a new backup but also when trying to create a backup from the "Contacts" directory - that is, one of the ones displaying the content by extraction from the backup. Due to the significant limitation of the use of the software, the error was considered a critical one. This fault stays reported to support the imazing.com site.

Support reacted in a few hours. They stated that the error message indicated some sort of corruption of one or more backups in that backup location and suggested created a new, clear folder to backup. These steps solved the problem and allowed for the correct creation of a full backup.
