Test plan			
Testing environments	services	system	browser
	Precision 5820 Tower	Windows 10 Pro for Workstations 64-bit	Google Chrome version 92.0.4515.107 (64-bit)
	Precision 5820 Tower	Windows 10 Pro for Workstations 64-bit	Mozilla Firefox 90.0.2 (64-bit)
	Precision 5820 Tower	Windows 10 Pro for Workstations 64-bit	Microsoft Edge 92.0.902.55 (64-bit)
	iPhone 12 mini	iOS 14.7.1	Google Chrome 92.0.4515.90
	iPhone 12 mini	iOS 14.7.1	Safari 14
Tested website	https://nutridome.pl/		
Approach to testing	Tasks should be executed for other testing environments. List of tasks include activities to 8h work, for one environment.		

Task	The expected result	Time [min]
1. Analysis of documentation	Knowledge about requires	15
2. Preparation of testing environment	Installed browsers	5
3. Functionalities Create an account by e-mail Create an account by Google Create an account by Facebook Login by e-mail Login by Google Login by Facebook	System response to correct/incorrect data	175

Put/delete a product to Favorites Put/delete a product to Basket	Making changes quantitative	
Order realization	Obtaining information about getting comprehensive user's data by system	
Payment process	Checking all methods of payment action (initiation)	
Checking Whatsapp Chat	Capacity to communicate with support	
4. Content Displaying random 50 products Displaying all subpages for the bottom menu	The possible absence of content	70
5. Security Login password Payment process	Information about passwords requires (evaluating of password strength) Checking all methods of payment action (initiation)	70
6. Performance Page loading time Displaying for random 50 products: images and videos	Delays occurrence Presence or absence of content	65

7. Preparation of documentation	Obtainment the list with a works/doesn't works features and suggestions to improve	80

Criteria of quality rating

      The base for the recognition website to implementation is dependent for many factors.

      First thing any faults at functionalities exclude the page for using. Above plan doesn't take into account all activities possibly to use at website, well continuation a test process is necessary filled about next features. Due to limited time in test plan didn't take into account website's usability and in a next part of testing it should be evaluates in a different cathegories by a few person. Next area that require further testing is completeness of content. Every subpage must be check for text and multimedia sources.

      A relevant issue is assurance to getting obligatory data to an create account and an order realisation, too.

      To recognition web store as ready to implementation testers must have certainty that: majority content is properly displayed, all features works, the system request correcct data and all payment method are safe and reliable.

      To summary - above plan is only a introduction to obtaint full quality website and acceptation to implementation.
